FATHIA OYINLOYE

QA Engineer | API Testing & Test Automation | Backend Engineering Foundation

Lagos, Nigeria | +234 704 825 4250 | fathiaoyinloye22@gmail.com | github.com/fathiaoyinloye | linkedin.com/in/fathiaoyinloye

PROFESSIONAL SUMMARY

QA Engineer with hands-on experience in manual and automated testing, API testing, backend systems, and CI/CD quality automation. Skilled in writing Pytest and JUnit 5 test suites, performing end-to-end API testing with Postman, designing adversarial test scenarios for data-integrity and multi-role access logic, and tracking defects through the full bug lifecycle. Strong backend engineering foundation in Java/Spring Boot and Python/Django, with experience building and testing systems across healthcare/EMR platforms, e-commerce ordering flows, and financial reporting tools — domains where reliability and data integrity are critical. Comfortable working with Git, Docker, CI/CD pipelines, Agile/Scrum teams, and unfamiliar codebases. An Accounting background further strengthens understanding of audit trails, data accuracy, and financial reporting logic.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Frameworks: Spring Boot, Spring Data JPA, Spring Security, Django, Django REST Framework, FastAPI, React

Databases: PostgreSQL, MySQL, MongoDB

Test Automation: JUnit 5, Mockito, Pytest, Cypress, Playwright (in progress)

API & Contract Testing: Postman, REST API validation, JWT authentication, RBAC authorization testing, data-integrity validation against PostgreSQL

Test Design & Execution: Functional, regression, exploratory, boundary, negative, integration, and concurrency/adversarial testing

Test Planning & Defect Management: Test plan authorship, test case design, requirement review, bug lifecycle tracking (GitHub Issues), severity classification, reproduction steps, fix verification

CI/CD & DevOps: GitHub Actions, Docker, AWS EC2, Git, automated quality gates, versioned deployments

Domain Expertise: Healthcare & multi-tenant SaaS (patient data isolation, offline-first sync, RBAC across clinical roles), e-commerce & online ordering (cart, checkout, inventory, order fulfillment), financial reporting & data accuracy informed by an Accounting background

Methods: Agile/Scrum, sprint ceremonies, requirement analysis, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Quality Engineer — Aroko (Coded) Technologies, Lagos, Nigeria — Sept 2025 – Present

MedSync — Multi-Tenant EMR & Hospital Management System

- Owned end-to-end quality for MedSync, a multi-tenant EMR and Hospital Management System — writing test plans and test cases and executing functional, regression, boundary, and negative test scenarios across patient records, laboratory, pharmacy, inpatient/ward management, and billing workflows.
- Designed adversarial and edge-case test scenarios for multi-tenant data isolation and offline-first synchronization — confirming that one facility's patient, staff, and billing data was never exposed to another tenant, and that records captured during connectivity outages synced correctly and conflict-free once connection was restored.
- Performed systematic API testing across clinical, laboratory, pharmacy, and billing endpoints — verifying request/response contracts, HTTP status codes, error handling, JWT authentication, and role-based access control (RBAC) across doctor, nurse, and administrative roles.
- Validated dual billing workflows (private pay and HMO) — covering partial payments, insurance claim submission, and coverage-mismatch edge cases, and cross-referencing invoice states against PostgreSQL database records to confirm end-to-end billing accuracy.
- Tracked defects end-to-end using GitHub Issues — writing bug reports with reproduction steps, expected vs. actual behavior, environment details, and severity ratings, then performing verification testing before closing.
- Participated in Agile sprint ceremonies, reviewing clinical and billing requirements before development began, flagging edge cases and ambiguities early, and completing features across two-week sprint cycles.

Quality Engineer — Arasupermart, Lagos, Nigeria **March 2023 – July 2025**

Online ordering platform

- Owned manual testing and test case design across product browsing, cart, checkout, and order-status flows for an online ordering platform, covering functional, boundary, and negative scenarios.
- Validated cart and checkout logic under edge cases — out-of-stock items, quantity limits, delivery-slot conflicts, and payment failures — identifying and documenting defects ahead of release and working directly with the backend team to reproduce issues and confirm fixes.
- Built backend logic in Python for the platform's product catalog, cart, and order-processing flows, including stock-level checks and order-status transitions from placed through delivered.
- Designed MongoDB data models for products, orders, and customer records to support real-time inventory tracking and order status across the ordering workflow.
- Collaborated cross-functionally with a UI/UX designer, product manager, and frontend engineer to validate feature requirements against real user flows before sign-off.

PROJECTS

SmartBudget — Integration, Regression & CI/CD Quality Automation **2023**

Pytest, Java, PostgreSQL, Third-Party API Integration, GitHub Actions, Docker, AWS EC2

- Maintained regression test cases across all report-generation modules — monthly summary, category breakdown, and spending trends — verifying output accuracy against manually computed expected results across varied datasets.
- Tested third-party API integration failure scenarios — timeouts, malformed responses, partial data, and service unavailability — confirming graceful error handling and consistent data state under every failure condition.
- Designed and implemented a CI-based quality gate pipeline using GitHub Actions that runs the full test suite in a clean Docker environment on every commit, blocks merges on failure, and publishes versioned builds to AWS EC2.

EDUCATION

Ordinary National Diploma (OND), Accounting

Lagos State Polytechnic, Lagos | 2021 – 2023

Strong foundation in analytical thinking, financial logic, and precision — qualities that directly support quality assurance, data validation, and defect detection.
